Fabric description

13.5 oz/yd² Indura Ultra Soft Navy Style 801
(measured weight 13.4 oz/yd²)

Reference Standard

ASTM F1959/F1959M-04 Standard Test Method for Determining the Arc Rating of Materials for Clothing

Test Parameters:

Test current: 8.20kA	Number of samples analysed: 21
Distance to Fabric: 12	Incident Energy Range: 17 to 25 cal/cm ²
Arc Gap: 12	

Summary

The arc rating of this material is intended for use as flame resistant clothing for workers exposed to electric arcs. The material used in this test method are in the form of flat specimens, actual performance of the complete garment may vary depending on the final design and assembly of the garment. This test method does not apply to the electrical contact or electrical shock hazard.

Based on the data obtained and analysed in accordance with the latest version of the applicable standards, the following Arc Rating was calculated.

Arc Thermal Performance Value, ATPV = 21.0 Cal/cm²
Heat Attenuation Factor, HAF = 85.4%

Panel data and observations of the fabric samples after the arc exposure were collected and summarized in the attached table. The graphs and statistics on the attached sheets provide more detailed information to better understand the Arc Rating assigned to this material. The client shall review this full report, the video recordings of the arc exposure and the photographs of the samples after the test to determine if the material meets the intended specification.
